Thailand Architecture in Steel 3 is a collection of architectural projects in Thailand composed using steel. Li-Zenn Publishing previously published the first Architecture in Steel collection in 2013 and the second collection in 2014. Since this series was launched, the architecture industry has been inspired to design buildings and interiors using steel. Architects, engineers, and construction contractors have found assurance in the quality of projects that use steel in their design. The recent growth in the use of steel is clearly evident, and the number of new high quality projects utilizing steel components has inspired this latest collection.
