114	SoHo Terrace		

From time immemorial, outdoor spaces have been essential parts of a house. Three hundred years ago, the most privileged spent much of their free time strolling through the gardens on their property, and they gave high priority to enjoying the outdoors as a way to improve health. Today, most homes have outdoor spaces that their owners can use for the activities they find most agreeable and interesting, including barbecues, enjoying a pool or a hot tub, sunbathing, eating, or playing and chatting late into the night. The inhabitants of houses decorate and fit out outdoor areas to meet their particular needs. It is not uncommon in large cities for skyscrapers to be topped by spectacular balconies with balconies that can be used to escape and forget the hustle and bustle of the city and that add greenery to a gray horizon. This book is a source of information and a trendy solution on outdoor garden design.
